

What is participatory budgeting?

Participatory budgeting is a new way to make decisions about publicly funded projects in our neighborhoods.

Participatory budgeting gives ordinary people real decision-making power over real money. It's already working in over 3,000 cities all over the world, and now participatory budgeting is being used in New York City.

This year, ten New York City Council Members asked their constituents to decide how to spend capital discretionary funds. Those are funds that can be used for physical improvements that benefit the public, and each district has committed at least \$1 million.

How does participatory budgeting work?

Last fall, district residents like you came to neighborhood assemblies to identify community needs and suggest projects. Then, volunteers joined delegate committees to develop those suggestions into project proposals, and worked with city agencies to estimate project costs. They put together the proposals you will vote on today.

Now is your chance to vote for the projects you think should get funded. The projects with the most votes, up to at least \$1 million, will be included in next year's city budget, to be built or implemented over the next few years.

You'll get to enjoy the improvements you help make happen. And hopefully, you'll be a part of future participatory budgeting efforts in the city!
